

MediQ7: The Natural Vitamin K2 MK-7 from Fermentation

Vitamin K2 MK-7
mediQ7

Heart Health

Prevents Arterial Calcification which may lead to heart attacks

Bone Health

Promotes calcium absorption into the bone, which promotes bone growth, and prevents the elderly's osteoporosis

Kidney Health

Improves glomerular filtration efficiency and renal vascular function

Brain Health

Protects cerebral nerves, and prevents cerebral vascular calcification and stroke

100% natural fermented Vitamin K2 MK-7 derived from *Bacillus subtilis* natto strain

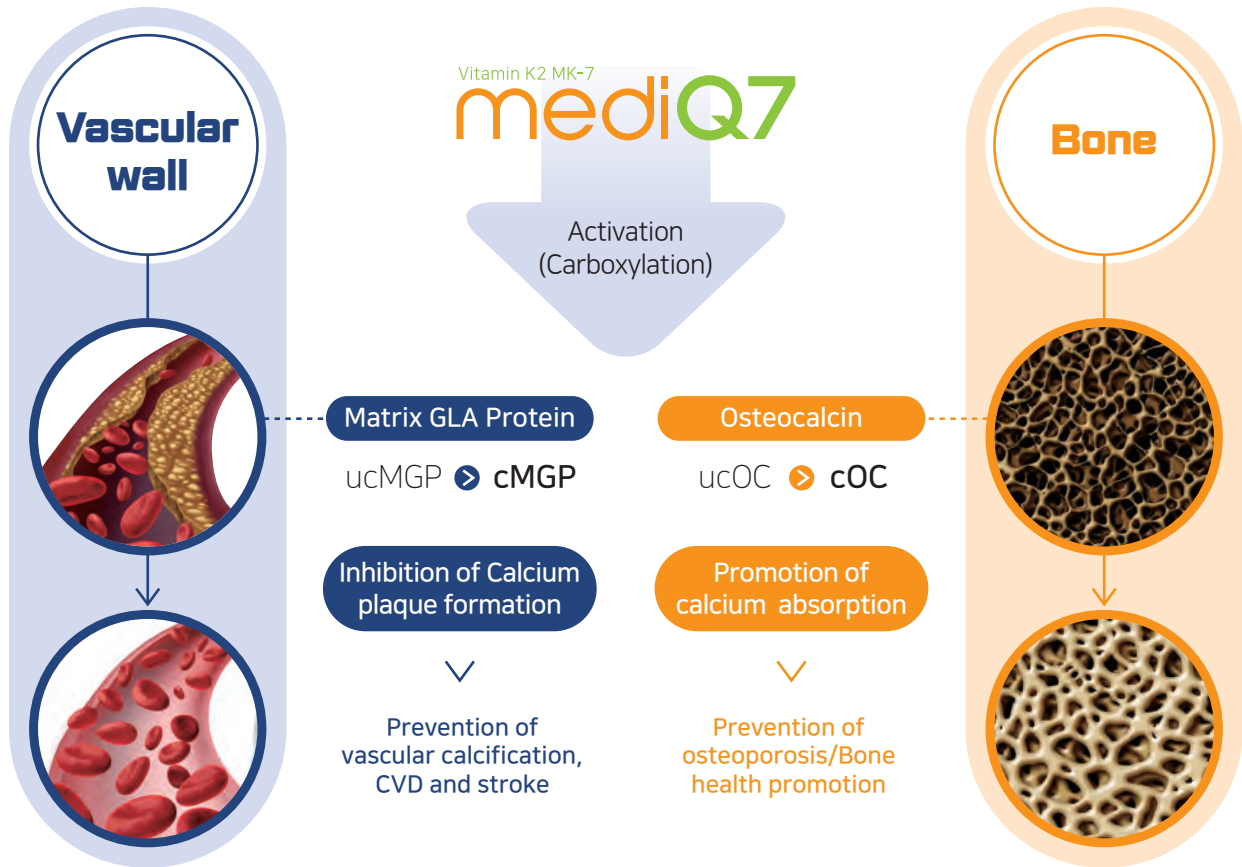

High purity of all-trans type Vitamin K2 MK-7 produced by supercritical CO₂ extraction

The most stable Vitamin K2 MK-7 by microencapsulation technology

No preservative, No chemicals, No chemical synthesis, Non-GMO, No allergen

ISO9001 / ISO22000
Halal / Kosher / Vegan
KGMP / GRAS

Vitamin K2 MK-7 action mechanism

Efficacies of Vitamin K2 MK-7

Cardiovascular health

Vascular calcification causes cardiovascular diseases such as arteriosclerosis, vascular stiffness, heart disease and myocardial infarction. Vitamin K2 intake may help prevent coronary artery disease by preventing calcification of blood vessels.

Kidney health

It may inhibit the calcification of kidney blood vessels, prevent kidney stones and improve glomerular filtration efficiency. It may also help reduce cardiovascular mortality in hemodialysis patients.

Cerebral health

It may prevent cerebral diseases such as Alzheimer's and stroke by inhibiting the calcification of cerebral capillaries.

Dental health

It may promote new dentin growth on the teeth, which reduces the occurrence of cavities and reduces the rate of tooth loss due to aging by activation of osteocalcin.

Bone health

Children and teenagers need 8-10 time-fold osteocalcin which promotes calcium absorption for bone growth. Bone is mostly developed during childhood and adolescence, and more than 90% of their maximum bone mass is formed by the ages of 18-20.

Vitamin K2 promotes calcium absorption into the bones making strong bones for children and teenagers, and it may prevent osteoporosis in adults.

Competitiveness of ^{Vitamin K2 MK-7} mediQ7

Natural Derivation

100% natural Vitamin K2 MK-7 fermented with *Bacillus subtilis natto*

Ultra high Purity

Ultra-high concentrated vitamin K2 MK7 (>96% MK7 conc. and 99.9% trans type) produced by supercritical CO₂ extraction

International Specifications

Meet USA's USP-DSC 2021 (USA pharmacopeia), European Novel Food and Chinese GB (Chinese national standards)

Safety and Certifications

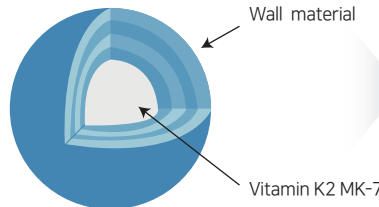

Non-GMO, No allergen, No preservative, No chemical, No chemical synthesis.
ISO9001/ ISO22000/ Halal/ Kosher/ Vegan/ GRAS / KGMP

^{Vitamin K2 MK-7} mediQ7 Microencapsulated MK-7

Market Issues

- Alkaline minerals such as Ca and Mg which are mainly used together reduce the storage stability of Vitamin K2 remarkably.
- Vitamin K2 is not easy to be applied to aqueous products as it is fat-soluble.

Microencapsulation

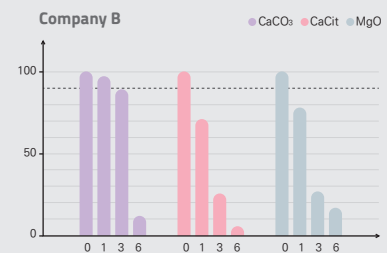

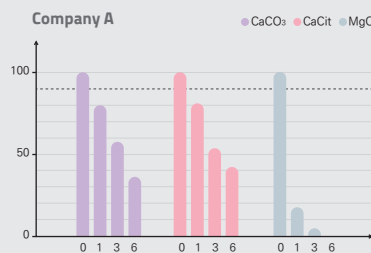

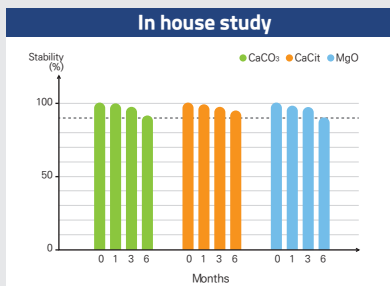

Solution

- Microencapsulated MediQ7 protects Vitamin K2 from the minerals such as Ca and Mg that destabilize Vitamin K2 during the storage
- Microencapsulated MediQ7 is water-dispersible and it can be freely applied to all kinds of beverages, yogurt, and milk, etc.

Stability (accelerated condition: 40°C R.H 75%)

MediQ7 microencapsulated K2 provides the sole solution for the K2 minerals stability problem which prevents many products from having less K2 content than that on the label.

Certifications of MediQ7 Vitamin K2 MK-7

KFDA Health Food GMP	Certified by KFDA for its quality assurance system of controlling production and quality across raw material incoming and product outgoing
Self-Affirmed GRAS	Granted self-affirmed GRAS(Generally Recognized as Safe) status, a designation by the U.S. Food and Drug Administration (FDA), for use as a food ingredient
Novel Food	Meets the specifications approved as Novel Food by EFSA.
ISO9001 / ISO22000	Acquired international certifications such as ISO9001 and ISO22000 in QA/QC system which satisfies HACCP standards.
Kosher / Halal	Acquired international certifications such as Kosher and Halal which are strict control systems for the selection of raw materials and the production and storage system according to Hebraism and Islamic laws, respectively.
Vegan	Acquired internationally recognized Vegan Certification for non-use of animal-derived raw materials and no animal testing.
Non GMO	Guaranteed for non-use of genetically modified organisms (GMOs)

Company Profile

GF Fermentech, a subsidiary company of GenoFocus, produces bioactive materials with core technologies based on strain development, fermentation, biotransformation, purification, and formulation. Over the past 20 years, we have been developing the best performing microbial strains and highly specialized extraction, purification, and formulation technologies, and we have been supplying the best-in-class bio-healthcare ingredients.
